

ELIMINATE SLOW FLOW

- ✓ *Easy installation*
- ✓ *Handles up to four products simultaneously*
- ✓ *Front-mounted LEDs indicating power and individual pump statuses*
- ✓ *Toggle switch for power to bypass the unit*
- ✓ *Selectable schedule times from 10 to 50 minute intervals*
- ✓ *Built-in test buttons*
- ✓ *Compatible with any pumps*
- ✓ *Does **not** interfere with existing leak detectors*
- ✓ *Expert support—we put our number right on the box for a reason*

Fix slow flow at your dispensers using the All-Line Equipment Fuel Line Repressurizer. The Fuel Line Repressurizer will increase your profits by eliminating downtime associated with slow flow issues in cold weather. This all-solid-state electronic system will automatically run any connected pumps at regular intervals to simulate user activity. This process maintains the pressure in the fuel lines, which prevents the mechanical leak detectors from entering slow flow mode without adding any delay to the dispensers.

Each pump connected has a customizable time interval from 10-50 minutes (these lengths can be modified on request).

Suitable facilities include: truck stops, bulk loading racks, convenience stores, unattended fueling sites, and above or underground storage tanks.
